

# BANLAW FUEL LOADING ARMS

## OFFERS MORE BENEFITS THAN JUST SAVING YOUR BACK

Banlaw installs & fully commissions each arm with a variety of fuel dispensing equipment which has established a reputation for its rugged design, performance, safety and reliability over 30 years.

#### Following Key Benefits;

- **Safety** - Supports the weight of the hose & refuelling coupling which minimises the operator manual handling loads.
- **Improved Fuel flowrate** - Best opportunity to optimise the dispensed flowrate of the fuel. Up to 1000lpm can be achieved.
- **Minimises slip & trip hazards** as the hose is not left on the ground.
- **Reliability** - Reduces wear & tear on the hose, less maintenance & increases service life.
- **Tailored design** to suit a variety of applications, including fixed refuelling bays and mobile service trucks.

**Drive-aways pose the greatest risk of equipment damage and potential human injury, and any controls implemented to reduce or eliminate the risk of a drive-away are highly recommended.**

# A SMART FUEL NOZZLE HOLSTER WILL SAVE INCIDENTS & MONEY

The latest range of Banlaw nozzle Holsters provide much improved reliability and are designed to withstand harsh operating conditions encountered in Mining Applications. Holsters are available to suit either the 800 or 1000 series in "Fixed Stand" or "Service Truck" versions.

## Key Advantages

### Vehicle Drive-away Deterrent

- An internal electronic proximity switch within the holster detects whether the refuelling nozzle is safely stored onto the holster.
- This proximity switch can then be used to initiate or control visual &/or audible alarms to alert the driver that the refuelling nozzle remains connected to the vehicle.
- Drive-aways not only risk serious damage to the fuel dispensing system, but may also cause fuel spillage and the risk of injury to bystanders.

### Improves safety & reliability

- integrates with Banlaw's FMS offering "Health Checks" of system.
- Storage for refuelling Nozzle.
- Reduces ingress, increasing nozzle life.
- Manufactured from Galvanised Steel.
- Reduces fuel spills.
